When the front steps start feeling like Mount Everest...

MAYBE IT’S TIME TO ADD TYVASO.

Tyvaso is approved for the treatment of pulmonary arterial hypertension (PAH; WHO Group I), to improve exercise ability.

Please see Important Safety Information throughout and on page 15 and accompanying Full Prescribing Information in pocket.
“I hope Tyvaso will help you, as it's helped me.”  
– Marla A., Tyvaso Patient

SELECTED IMPORTANT SAFETY INFORMATION

Before you take Tyvaso, tell your healthcare provider about all of your medical conditions, including if you:

- Have lung disease, such as asthma or chronic obstructive pulmonary disease (COPD)
- Have a lung infection
- Have liver or kidney problems
- Have low blood pressure
- Have bleeding problems

Please see Important Safety Information throughout and on page 15 and accompanying Full Prescribing Information in pocket.

If you're not doing as well as you'd like, are you ready to talk with your doctor about Tyvaso?
When your best friend wonders why your walks are getting shorter...

MAYBE IT’S TIME TO ADD TYVASO.

What is Tyvaso?

Tyvaso (treprostinil) is a prescription medicine used in adults to treat pulmonary arterial hypertension (PAH; WHO Group I), which is high blood pressure in the arteries of your lungs. Tyvaso can improve the ability to exercise. Your ability to exercise decreases 4 hours after taking Tyvaso. It is not known if Tyvaso is safe and effective in children under 18 years of age.

SELECTED IMPORTANT SAFETY INFORMATION

Before you take Tyvaso, tell your healthcare provider about all of your medical conditions, including if you (continued):

- Are pregnant or plan to become pregnant. It is not known if Tyvaso will harm your unborn baby.
- Are breast-feeding or plan to breast-feed. It is not known if Tyvaso passes into your breast milk. Talk to your healthcare provider about the best way to feed your baby during treatment with Tyvaso.

Please see Important Safety Information throughout and on page 15 and accompanying Full Prescribing Information in pocket.
"Tyvaso helps me walk a little farther and do a little more."
– Karen F., Tyvaso Patient.

SELECTED IMPORTANT SAFETY INFORMATION
Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements. Tyvaso and other medicines may affect each other.
Especially tell your healthcare provider if you take:

- Medicines used to treat high blood pressure or heart disease
- Medicines that decrease blood clotting (anticoagulants)
- Water pills (diuretics)
- Gemfibrozil (Lopid) or rifampin (Rimactane, Rifadin, Rifamate, Rifater)

Please see Important Safety Information throughout and on page 15 and accompanying Full Prescribing Information in pocket.
Prostacyclin is essential

Prostacyclin is a natural substance made by your body. Prostacyclin helps keep the blood vessels in the lungs open and working properly. Patients with PAH may not produce enough natural prostacyclin.

Tyvaso is a form of man-made prostacyclin called a prostacyclin analogue. It mimics some of the effects of natural prostacyclin, helping to keep the blood flowing through your lungs.

**NORMAL LEVEL OF PROSTACYCLIN**

**PROSTACYCLIN DEFICIENCY**

**ADDING PROSTACYCLIN ANALOGUE**

Tyvaso may help you walk farther

In a 12-week clinical trial, patients who added Tyvaso to their oral medicine (bosentan or sildenafil) walked an average of 71 feet (21.6 meters) during their 6-minute walk test, and those who did not add Tyvaso walked an average of 10 feet (3 meters).

Adding Tyvaso may help you do more in your day—go for a stroll, walk your kids to the bus stop, or walk to a mailbox.

When hanging with the gang goes from once a month to once in a while... MAYBE IT’S TIME TO ADD TYVASO.

How Tyvaso works

**TYVASO ACTS BY**

- **Helping to stop blood platelets from clumping together**
- **This may help the heart pump blood more easily into the lungs**
- **Helping to open up the blood vessels in the lungs**

**SELECTED IMPORTANT SAFETY INFORMATION**

What are the possible side effects of Tyvaso?

Tyvaso can cause serious side effects, including:

- **Low blood pressure (hypotension)**. If you take low blood pressure medicine, Tyvaso may lower your blood pressure more.
- **Bleeding problems.** Tyvaso may increase the risk of bleeding in people who take blood thinners (anticoagulants).

Please see Important Safety Information throughout and on page 15 and accompanying Full Prescribing Information in pocket.
Need financial assistance?
There are programs, such as the Tyvaso Co-pay Assistance Program, that may be available to assist you.

“I like talking to other patients and sharing my experience. Knowledge is power. And the more you know, the less scary it is.”
– Karen F., Tyvaso Mentor

HAVING PAH CAN BE LIFE CHANGING.
But one thing you can be sure of is that there are lots of places to turn for help.

Find helpful videos, tools, and downloads.
You’ll find lots of help on our website, as well as links to additional resources.

Go to www.Tyvaso.com

The Tyvaso Inhalation System is a lightweight portable device.

Before you take Tyvaso, tell your healthcare provider about all of your medical conditions, including if you:
- Have lung disease, such as asthma or chronic obstructive pulmonary disease (COPD)
- Have a lung infection
- Have liver or kidney problems
- Have low blood pressure
- Have bleeding problems
- Are pregnant or plan to become pregnant. It is not known if Tyvaso will harm your unborn baby.
- Are breast-feeding or plan to breast-feed. It is not known if Tyvaso passes into your breast milk. Talk to your healthcare provider about the best way to feed your baby during treatment with Tyvaso.

Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements. Tyvaso and other medicines may affect each other.

Especially tell your healthcare provider if you take:
- Medicines used to treat high blood pressure or heart disease
- Medicines that decrease blood clotting (anticoagulants)
- Water pills (diuretics)
- Gemfibrozil (Lopid) or rifampin (Rimactane, Rifadin, Rifamate, Rifater)

What are the possible side effects of Tyvaso?

Tyvaso can cause serious side effects, including:
- Low blood pressure (symptomatic hypotension). If you have low blood pressure, Tyvaso may lower your blood pressure more.
- Bleeding problems. Tyvaso may increase the risk of bleeding in people who take blood thinners (anticoagulants).

The most common side effects of Tyvaso are cough, headache, throat irritation and pain, nausea, reddening of the face and neck (flushing), fainting or loss of consciousness, dizziness, and diarrhea. These are not all the possible side effects of Tyvaso. Call your doctor for medical advice about side effects.

You may report side effects to the FDA at www.fda.gov/MedWatch or call 1-800-FDA-1088. TYVISO® OCT17

Please see the Full Prescribing Information, Patient Product Information, and the Tyvaso Inhalation System Instructions for Use manual in pocket.

For additional information about Tyvaso, visit www.tyvaso.com or call 1-877-UNITHER (1-877-864-8437).

How does Tyvaso fit in your day?

WORK YOUR TYVASO TREATMENTS AROUND YOUR DAY

1
set-up daily

~2-3 MIN
for each treatment session

9
breaths per treatment session (the target dose) or the dose your doctor has prescribed

4

treatment sessions per day, approximately every 4 hours, during waking hours

It helps to link your treatments to daily activities, eg, breakfast, lunch, dinner, and bedtime.

The Tyvaso Inhalation System is a lightweight portable device.

How do I get Tyvaso?

If you and your doctor agree that Tyvaso could help you, a referral or application for your Tyvaso prescription will go to a Specialty Pharmacy Services (SPS) Provider. Once approved, an SPS nurse will come to your home or your doctor's office to show you how to use the Tyvaso Inhalation System and will support you as you begin therapy.

Ask your doctor if it's the right TIME TO ADD TYVASO.
