When the front steps start feeling like Mount Everest...

MAYBE IT’S TIME TO ADD TYVASO.

Tyvaso is approved for the treatment of pulmonary arterial hypertension (PAH; WHO Group I), to improve exercise ability.

Please see Important Safety Information throughout and on page 15 and accompanying Full Prescribing Information in pocket.
“I hope Tyvaso will help you, as it’s helped me.”
– Marla A., Tyvaso Patient

SELECTED IMPORTANT SAFETY INFORMATION
Before you take Tyvaso, tell your healthcare provider about all of your medical conditions, including if you:

- Have lung disease, such as asthma or chronic obstructive pulmonary disease (COPD)
- Have liver or kidney problems
- Have low blood pressure
- Have bleeding problems

Please see Important Safety Information throughout and on page 15 and accompanying Full Prescribing Information in pocket.

If you're not doing as well as you'd like, are you ready to talk with your doctor about Tyvaso?

SELECTED IMPORTANT SAFETY INFORMATION
Before you take Tyvaso, tell your healthcare provider about all of your medical conditions, including if you:

- Have lung disease, such as asthma or chronic obstructive pulmonary disease (COPD)
- Have a lung infection
- Have liver or kidney problems
- Have low blood pressure
- Have bleeding problems

Please see Important Safety Information throughout and on page 15 and accompanying Full Prescribing Information in pocket.

If you're not doing as well as you'd like, are you ready to talk with your doctor about Tyvaso?
What is Tyvaso?

Tyvaso (treprostinil) is a prescription medicine used in adults to treat pulmonary arterial hypertension (PAH; WHO Group I), which is high blood pressure in the arteries of your lungs. Tyvaso can improve the ability to exercise. Your ability to exercise decreases 4 hours after taking Tyvaso. It is not known if Tyvaso is safe and effective in children under 18 years of age.

SELECTED IMPORTANT SAFETY INFORMATION
Before you take Tyvaso, tell your healthcare provider about all of your medical conditions, including if you (continued):
- Are pregnant or plan to become pregnant. It is not known if Tyvaso will harm your unborn baby.
- Are breast-feeding or plan to breast-feed. It is not known if Tyvaso passes into your breast milk. Talk to your healthcare provider about the best way to feed your baby during treatment with Tyvaso.

Please see Important Safety Information throughout and on page 15 and accompanying Full Prescribing Information in pocket.

"Tyvaso helps me walk a little farther and do a little more."
– Karen F., Tyvaso Patient

SELECTED IMPORTANT SAFETY INFORMATION
Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements. Tyvaso and other medicines may affect each other.

Especially tell your healthcare provider if you take:
- Medicines used to treat high blood pressure or heart disease
- Medicines that decrease blood clotting (anticoagulants)
- Water pills (diuretics)
- Gemfibrozil (Lopid) or rifampin (Rimactane, Rifadin, Rifamate, Rifater)

Please see Important Safety Information throughout and on page 15 and accompanying Full Prescribing Information in pocket.

Why should I consider Tyvaso?

Why should I consider Tyvaso?
Prostacyclin is essential

Prostacyclin is a natural substance made by your body. Prostacyclin helps keep the blood vessels in the lungs open and working properly. Patients with PAH may not produce enough natural prostacyclin.

Tyvaso is a form of man-made prostacyclin called a prostacyclin analogue. It mimics some of the effects of natural prostacyclin, helping to keep the blood flowing through your lungs.

How Tyvaso works

Tyvaso mimics the natural prostacyclin you are missing.

Tyvaso acts by

Helping to stop blood platelets from clumping together

Helping to open up the blood vessels in the lungs

Tyvaso is inhaled directly into your lungs.

SELECTED IMPORTANT SAFETY INFORMATION

What are the possible side effects of Tyvaso?

Tyvaso can cause serious side effects, including:

- Low blood pressure (symptomatic hypotension). If you have low blood pressure, Tyvaso may lower your blood pressure more.
- Bleeding problems. Tyvaso may increase the risk of bleeding in people who take blood thinners (anticoagulants).

Tyvaso may also cause less common side effects, including:

- Headache
- Cough
- Throat irritation and pain
- Nausea
- Diarrhea
- Fainting or loss of consciousness
- Dizziness
- Reddening of the face and neck (flushing)

These are not all the possible side effects of Tyvaso. Call your doctor for medical advice about side effects.

Please see Important Safety Information throughout and on page 15 and accompanying Full Prescribing Information in pocket.
Prostacyclin is essential

Prostacyclin is a natural substance made by your body. Prostacyclin helps keep the blood vessels in the lungs open and working properly. Patients with PAH may not produce enough natural prostacyclin.

NORMAL LEVEL OF PROSTACYCLIN

PROSTACYCLIN DEFICIENCY

ADDING PROSTACYCLIN ANALOGUE

Tyvaso may help you walk farther

In a 12-week clinical study of Tyvaso, patients were taking an oral PAH medicine (bosentan or sildenafil) and completed a 6-minute walk test at the beginning and end of the study. Patients who added Tyvaso walked an average of 71 feet (21.6 meters) farther at the end of the study. Those who did not add Tyvaso walked an average of 10 feet (3 meters) farther.

WHAT DOES THIS MEAN TO ME?

Adding Tyvaso may help you do more in your day—go for a stroll, walk your kids to the bus stop, or walk to a mailbox.

SELECTED IMPORTANT SAFETY INFORMATION

What are the possible side effects of Tyvaso?

Tyvaso can cause serious side effects, including:

- Low blood pressure (sudden and unexplained), especially if you have low blood pressure. Tyvaso may lower your blood pressure more.
- Bleeding problems. Tyvaso may increase the risk of bleeding in people who take blood thinners (anticoagulants).

Call your doctor for medical advice about side effects.

Need financial assistance?
There are programs, such as the Tyvaso Co-pay Assistance Program, that may be available to assist you.

HAVING PAH CAN BE LIFE CHANGING.
But one thing you can be sure of is that there are lots of places to turn for help.

Find helpful videos, tools, and downloads.
You’ll find lots of help on our website, as well as links to additional resources.

Get support today.
Whether you’re considering Tyvaso or taking it already, this email newsletter is packed with information, education, and helpful tips. Before starting Tyvaso, you’ll learn more about how Tyvaso works, how it can fit into your daily schedule, and information to discuss with your doctor. We’ll also send you information and updates on PAH, plus helpful hints and suggestions from other patients. Wherever you are on your journey, sign up and start receiving this support right away.

Reach out to a current patient—learn what taking Tyvaso is really like.
No one can offer support quite like someone already taking Tyvaso. We offer a program that connects you with a current Tyvaso patient who can answer questions and give you lifestyle tips. Tyvaso PEER Mentors volunteer their time to support new patients and people who are considering Tyvaso. Reach out and connect with the Tyvaso PEER Network today!

The Tyvaso Inhalation System is a lightweight portable device.

Before you take Tyvaso, tell your healthcare provider about all of your medical conditions, including if you:

- Have lung disease, such as asthma or chronic obstructive pulmonary disease (COPD)
- Have a lung infection
- Have liver or kidney problems
- Have low blood pressure
- Have bleeding problems
- Are pregnant or plan to become pregnant. It is not known if Tyvaso will harm your unborn baby.
- Are breast-feeding or plan to breast-feed. It is not known if Tyvaso passes into your breast milk. Talk to your healthcare provider about the best way to feed your baby during treatment with Tyvaso.

Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements. Tyvaso and other medicines may affect each other.

Especially tell your healthcare provider if you take:

- Medicines used to treat high blood pressure or heart disease
- Medicines that decrease blood clotting (anticoagulants)
- Water pills (diuretics)
- Gemfibrozil (Lopid) or rifampin (Rimactane, Rifadin, Rifamate, Rifater)

What are the possible side effects of Tyvaso?

Tyvaso can cause serious side effects, including:

- Low blood pressure (symptomatic hypotension). If you have low blood pressure, Tyvaso may lower your blood pressure more.
- Bleeding problems. Tyvaso may increase the risk of bleeding in people who take blood thinners (anticoagulants).

The most common side effects of Tyvaso are cough, headache, throat irritation and pain, nausea, reddening of the face and neck (flushing), fainting or loss of consciousness, dizziness, and diarrhea. These are not all the possible side effects of Tyvaso. Call your doctor for medical advice about side effects.

You may report side effects to the FDA at www.fda.gov/MedWatch or call 1-800-FDA-1088.
