Overview of your TYVASO Inhalation System

Section overview

This section introduces you to your TYVASO Inhalation System and provides important safety information about using your system.

What you will need:

- A clean place to review these instructions
- TYVASO Inhalation System to refer to while reading instructions
What’s covered in this section:

A: Introduction 6
B: Safety and general instructions 8
C: Buttons, indicators, and markings 10
D: Inhalation device display screens 16

Important:

Do not start treatment with TYVASO until you have been trained to use the TYVASO Inhalation System. Make sure you understand all of the directions. Always ask your doctor or specialty pharmacy provider if you have any questions or are unsure of anything you are taught.
A: Introduction

Your doctor has prescribed TYVASO® (treprostinil) Inhalation Solution. Please see the accompanying Patient Package Insert for important safety information on TYVASO.

TYVASO is a prescription medicine used in adults to treat pulmonary arterial hypertension (PAH) (WHO Group 1), which is high blood pressure in the arteries of your lungs. TYVASO can improve exercise ability in people who also take bosentan (an endothelin receptor antagonist) or sildenafil (a phosphodiesterase type 5 inhibitor). The effects decrease over 4 hours; treatment timing can be adjusted for planned activities.

TYVASO is breathed in (inhaled) using the TYVASO Inhalation System, which consists of the inhalation device and its accessories.

These Instructions for Use (IFU) for the TYVASO Inhalation System provide important safety information. It is important that you read these instructions and the TYVASO Patient Package Insert (PPI) before setting up and using the TYVASO Inhalation System. If you have any questions, talk to your doctor or specialty pharmacy provider.

Before beginning treatment with TYVASO, you will receive either a Patient Starter Kit containing a 28-day supply of TYVASO or an Institutional Starter Kit containing a 4-day supply of medication.
Both kits include two (2) complete inhalation devices (all accessories and supplies included). When you refill your prescription for TYVASO each month, you will receive a Refill Kit that contains a 28-day supply of TYVASO and new accessories. You will receive two (2) replacement devices every two (2) years.

> **CAUTION:** Federal law restricts this device to sale by or on the order of a physician, or other licensed practitioner.

**Important:**
- Keep these Instructions for Use in a safe place where you can easily get to it for reference. For example, store the booklet in the TYVASO Inhalation System carrying case, along with your other supplies.
- TYVASO Inhalation System is intended solely for the delivery of TYVASO (treprostinil) Inhalation Solution. TYVASO is for administration only with the TYVASO Inhalation System.
B: Safety and general instructions

The TYVASO Inhalation System should be handled carefully. Take the following precautions and follow all instructions in this document to avoid injury and ensure proper use:

Delivering treatments:

- Read the instructions carefully and completely to prevent damage to your TYVASO Inhalation System and help you get the best results.
- This device should only be used on the order of your doctor or licensed healthcare practitioner.
- Conduct only the number of treatment sessions and inhalations you have been prescribed.
- Ensure the breath counter is correctly programmed prior to beginning a treatment (see page 22).
- Do not leave the device turned on when not conducting a treatment session.
- Do not use the device with an anesthetic breathing system or ventilator breathing system.
- Use only the supplies provided in the Starter Kit and Monthly Refill Kit for correct device function.

Handling the device:

- Do not peel or remove the labels from the device.
- Do not drop the device.
- The device does not include internal, replaceable parts. Do not attempt to open the device, modify the device, or remove device labeling.
Your environment:

- Do not leave the device alone with a small child.
- Do not immerse the device in water or other liquids, or place in dishwasher.
- Do not place any system components in a microwave, conventional oven, or dishwasher.
- Do not use the device near flammable liquids and materials or heated surfaces.
- Do not place the device or use the device in the presence of strong electric or magnetic fields (eg, microwave oven, magnetic imaging equipment).
- Wireless communications equipment (eg, cell phone) can affect operation of the device and should be kept at least a distance of 3.3 meters (about 11 feet) away while using the device.

- If the device performance is affected by exposure to any conditions listed here, see the Troubleshooting section, or contact your healthcare provider or specialty pharmacy provider.
C: Buttons, indicators, and markings

**Inhalation device**

**Inhalation indicator lights**
Lights on top of device flash green when you should inhale.

**On/Off, Start/Pause button**
Press and hold to power device on or off. Once device is on, press and release (do not hold down) to start or pause treatment.

**Device Display**
Provides instructions and device information.
Run / Program switch
Slide up to Run mode when you’re ready to deliver your dose. Slide down to Program mode to program the number of breaths for your dose.

Volume / Breaths switch
When set to Run mode, push + to increase beeping volume, or push - to decrease beeping volume.

When set to Program mode, push + to increase the number of breaths, or push - to decrease the number of breaths required for each dose.
Inhalation device (continued)

**Power status light**
- Lights green when power is connected and battery is charging.

**Power port**
- Port for plugging into a power source using the AC wall plug.
Additional device markings

Manufacturer. Indicates the medical device manufacturer. (Symbol 5.1.1 of ANSI/AAMI/ISO 15223-1: 2012 Medical devices - symbols to be used with medical devices labels, labeling, and information to be supplied - part 1: general requirements.)

Equipment should not be disposed of in the trash. (Figure 1 of BS EN 50419:2006 - Marking of Electrical and Electronic Equipment in accordance with Article 11(2) of Directive 2002/96/EC (WEEE)

Catalogue number. Indicates the manufacturer’s catalogue number so that the medical device can be identified. (Symbol 5.1.6 of ANSI/AAMI/ISO 15223-1: 2012 Medical devices - symbols to be used with medical devices labels, labeling, and information to be supplied - part 1: general requirements)

Serial number. Indicates the manufacturer’s serial number so that a specific medical device can be identified. (Symbol 5.1.7 of ANSI/AAMI/ISO 15223-1: 2012 Medical devices - symbols to be used with medical devices labels, labeling, and information to be supplied - part 1: general requirements)
Underwriters Laboratories. Meets Underwriters Laboratories certification for general requirements for basic safety and essential performance per IEC 60601-1 specifications (UL-60601-1 Medical Electrical Equipment, Part 1: General Requirements for Safety)

Consult instructions for use. Please read the accompanying instructions and labels for important information regarding the TYVASO Inhalation System. (Symbol 5.4.3 of ANSI/AAMI/ISO 15223-1: 2012 Medical devices - symbols to be used with medical devices labels, labeling, and information to be supplied - part 1: general requirements)

The TYVASO Inhalation System has a Type BF Applied part. Type BF Applied parts comply with specific requirements to provide protection against shock and are not suitable for direct cardiac applications. (Symbol 5333 of IEC 60417 Database Snapshot - Graphical symbols for use on equipment)

The TYVASO Inhalation System requires a 14V DC power supply. Use only the power supply intended for the TYVASO Inhalation System. (Symbol 5331 of IEC 60417 Database Snapshot - Graphical symbols for use on equipment)

Programming your TYVASO Inhalation System before use

Section overview
This section provides instructions for charging your device, setting your dose, and adjusting the device’s audio volume before you use the device for a treatment.

What you will need:

- A clean place to work with the device
- TYVASO Inhalation Device
- The number of breaths your doctor prescribed for each dose
What’s covered in this section:

A: Charging device before use 20
B: Setting your prescribed dose 22
C: Adjusting device’s audio volume 24

Important:
Do not start treatment with TYVASO until you have been trained to use the TYVASO Inhalation System. Make sure you understand all of the directions. Always ask your doctor or specialty pharmacy provider if you have any questions or are unsure of anything you are taught.
A: Charging device before use

1. Plug in device

**Important:** A new device might not be fully charged when you receive it. Always charge the device before you first use it. You can also charge the device overnight, when not in use and in between uses.

Plug the AC wall plug’s white connector into the port on the back of the inhalation device. Then, plug the AC wall plug into the wall outlet.

The power status light above the port will light green when properly plugged in.
2. Check the battery’s status

Make sure the Run / Program switch is set to Run. Press and hold the blue button to power on the device.

The battery icon at the bottom of the screen indicates battery status.

When you are done checking the battery status, press and hold the On/Off button until the display screen shuts off (note: letting the button go before the screen shuts off will start a treatment session).

If there is not enough charge to conduct a treatment session, “Charge battery” appears on screen.
### Setting your prescribed dose

Your doctor will prescribe the number of breaths you should take in each treatment session. You should program this number into the inhalation device before you use the device.

#### 1. Switch to Program

Slide the Run / Program switch on the side of the device down to Program mode. In Program mode you enter the prescribed number of breaths for each dose. You cannot begin a treatment in Program mode.

#### 2. Power on

Press and hold the On/Off button until the display screen turns on. The Program Breaths screen appears. The number of breaths currently set for each treatment session will flash.
3. Set breaths
Use the Volume / Breaths toggle button to enter your prescribed number of breaths onto the program screen.

- **Increase breaths**
- **Decrease breaths**

4. Switch to Run
Slide the Run / Program switch up to Run mode. Make sure your new breath count appears on screen.

5. Power off
Press and hold the On/Off button until the display screen shuts off (note: letting the button go before the screen shuts off will start a treatment session).

Note: You will not need to program the breath count again, unless your prescribed number of breaths changes.
C: Adjusting device’s audio volume

You can use the Volume / Breaths toggle button to adjust the volume of the audible signals (beeps) that the device provides as feedback during treatment sessions.

1. Switch to Run

Slide the Run / Program switch up to Run mode, if it is not in this position already.

2. Power on

Press and hold the On/Off button until the display screen turns on, if it is not already turned on. The programmed number of breaths will appear with the words “Breaths left” and the battery icon at the bottom.
3. Adjust volume

With the Run / Program switch in the Run position, press the Volume / Breaths toggle button to access the Adjust Volume screen. Push + on the Volume / Breaths toggle button to increase beeping volume, or push - to decrease beeping volume.

4. Power off

After adjusting the beeping volume up or down, the screen will display your new setting for a couple of seconds then return to the screen displaying the breaths left.

Press and hold the On/Off button until the display screen shuts off (note: letting the button go before the screen shuts off will start a treatment session).
Preparing and using your TYVASO Inhalation System for daily treatments

Section overview
This section provides instructions for preparing and using your nebulizer everyday for treatments.

What you will need:
- A clean place to take your medicine
- TYVASO Inhalation device
- TYVASO Inhalation supplies
- One ampule of TYVASO Inhalation Solution
What’s covered in this section:

A: Prepare a proper environment 28
B: Gather supplies 29
C: Fill water chamber and medicine cup 32
D: Assemble inhalation device 35
E: Power on inhalation device 40
F: Inhale your medicine 42

Important:

Before using the TYVASO Inhalation System, you should:

- Wash your hands.
- Make sure the device is resting on a stable, flat surface during assembly.
A: Prepare a proper environment

Follow these important instructions before setting up your treatment:

- Use the device in a quiet, distraction-free area.
- Try to use the device at times when your treatment will not be interrupted. If you encounter any distractions during treatment, you can pause your treatment (see page 44).
- Use the device in a comfortable space where you can stand or sit in an upright position.
- Use the device in an area where you can access a power source if you need to use the AC wall plug.
- The TYVASO Inhalation System is recommended for use indoors.
- Use the device in an area that provides enough space for the TYVASO Inhalation System and its accessories.
- Gather all necessary supplies on a stable, flat surface for assembly (see page 29 for list of supplies).
- Be sure to use and store the inhalation device in environments that match the specified temperature and humidity ranges (see “Specifications” starting on page 76.)
- Use the device in a well-lit area where you can clearly read these instructions, labels on the device, and the device screen.
B: Gather supplies

Gather the following supplies before starting treatment. Use only the supplies provided in the starter kit and monthly refill kit for correct device function. Prior to use, inspect each part and do not use parts if they appear damaged or have debris or contaminants in them.

Inhalation device
Powered off

TYVASO ampules
Use one (1) ampule per day

Water level cup
with 45 mL of distilled water

Note: Supplies are not shown to scale.
Gather supplies

Filter membranes*
Use two (2) per day

Medicine cups*
Use one (1) per day

Dome assembly*

Mouthpiece*

Inhalation piece*

Two (2) filter shells*

Note: Supplies are not shown to scale.

*These accessories are replaced every month. Replacement accessories are included in the Monthly Refill Kit.
Gather supplies

Prepare and Use:

- **Two (2) Plugs***
  (Used when storing the device)

- **Carrying case**

- **Pen or pencil** (not provided)
  to record your treatment

- **Distilled water carrier**

- **AC wall plug**

- **Treatment Tracker**
C: Fill water chamber and medicine cup

1. Fill chamber

Fill the water level cup with distilled water up to the arrow markers on the water cup. Use fresh distilled water with each preparation (i.e., do not use water remaining in the chamber from a previous treatment). Pour the distilled water into the water chamber.

Make sure the water level is above the upper, silver sensor and below the blue ring in the water chamber (about 45 mL of distilled water).

Do not overfill the water chamber, or else the medicine cup might not fit correctly.

Important:

- Wash your hands

- UNPLUG device when filling to avoid damage to cords or connectors.

- ONLY USE DISTILLED WATER in the device. Distilled water is highly purified water that is required for the device to function properly. If you use another type of water (such as bottled or tap water), the device might not function properly. You can purchase distilled water at most grocery stores and pharmacies.
2. Place medicine cup

Obtain one (1) new medicine cup and inspect it. **DO NOT** use a medicine cup that is damaged (e.g., cracked or contains holes or dents), contains debris or contaminants, or was previously used.

Place the empty medicine cup into the chamber of the device, making sure that the cup’s bottom tip is in the distilled water.

⚠️ **CAUTION:** Make sure you place only one medicine cup. Placing multiple cups will prevent the flow of medicine.

3. Gather one ampule

Carefully cut open the top of the foil pouch, making sure not to cut the ampules. Each pouch contains four (4) ampules. Remove one (1) ampule of TYVASO.

Keep unused ampules in the foil pouch because the TYVASO medicine is sensitive to light. Write the date you first opened the pouch on the foil pouch.

One ampule contains enough medicine for one day of treatment no matter how many breaths your doctor has prescribed.

⚠️ **CAUTION:** Ampules must be used within 7 days of opening foil pouch. Open only 1 pouch at a time. Discard any unused ampules after 7 days.
4. Open ampule
Gently hold the ampule in the upright (top up) position and twist off its top.

⚠️ CAUTION: If any medicine from the ampule spills on your hands, wash your hands immediately. Medicine contact with the skin can cause irritation.

5. Squeeze ampule
Point the ampule straight down toward the medicine cup’s center to avoid spills.
Gently squeeze the medicine out of the ampule into the medicine cup. Squeeze until it is empty. Check to see that all of the medicine is in the medicine cup.
**D: Assemble inhalation device**

**Important:** Do not force parts together.

The TYVASO Inhalation System is designed so the parts only fit together properly one way. When the device is assembled correctly, the parts should fit together easily.

1. **Check dome assembly**

Visually check to make sure the black ring is securely placed in the dome assembly. The black ring should appear as it does in the images below.

In the unlikely event that the black ring is loose or disconnected, use a new dome assembly. If you need to order a new dome assembly, contact your specialty pharmacy provider.
2. Attach dome assembly

Align the raised circle on the side of the dome assembly with the raised circle on the side of the device.

Push down and screw the dome assembly onto the device clockwise (right) until the filter shell port is tight and pointed to the back of the device. You will hear clicks (or a slight crunching sound) as the dome assembly presses down on the medicine cup.

**Important:** The dome assembly “clicks” only the first time it connects to the medicine cup. If you then realign the dome assembly you will not hear another click.
3. Install new filter membrane

Each day you will need to use a new filter membrane in each filter shell.

Note: New filter shells come with fresh filter membranes already installed.

To install a new filter membrane:

 ► a. Open the filter shell by unscrewing the two (2) halves.

 ► b. Place a new filter membrane in one (1) of the filter shell halves.

 ► c. Close the filter shell by screwing the two (2) halves together until you can twist no further.

 ► d. Repeat steps a-c for second filter shell.
4. Attach filter shells

Insert one (1) filter shell into the filter shell port on the side of the dome assembly and insert the second filter shell into the port on the bottom of the inhalation piece. The filter shells are identical and can be used in either port. You can turn the filter shells around to fit into the ports, as needed.

Make sure to insert filter shells straight into ports, NOT at an angle.

5. Insert inhalation piece

Insert the inhalation piece with attached filter shell into the upper opening of the dome assembly and rotate toward the front of the device. Gently push down the inhalation piece to make sure it is securely inserted in the dome assembly.
6. Insert mouthpiece

Carefully insert the mouthpiece into the inhalation piece.

7. Check assembled device

When the device is fully assembled, it should appear as it does below. Slightly rotate the inhalation piece so you can see the display screen, which provides important prompts during your treatment.

Important: DO NOT use device if you see liquid leaking from bottom of the device.
**E: Power on inhalation device**

**1. Power on device**

Press and hold the On/Off button until the screen turns on and the device beeps once.

The screen will display the splash screen, then the time since your last treatment, then the current breaths programmed for each dose.

**Important:** Make sure the number on screen above “Breaths left” matches the prescribed number of breaths for that treatment session. If it does not match, see page 22 for instructions on setting the number of breaths for a treatment session.
2. Plug in device, if needed

If the device’s internal battery is too low to deliver a full treatment, the screen will display an instruction to plug in the power to charge the device battery. If the battery is fully depleted, the screen will not turn on.

You can conduct a treatment session with the power plugged in. First, plug the AC wall plug’s white connector into the port on the back of the inhalation device. Then, plug the AC wall plug into the wall outlet. The power status light above the port will light green when properly plugged in.

You can charge the battery at any time, before the screen displays “Charge battery.”
F: Inhale your medicine

1. Before starting, confirm treatment

You will inhale TYVASO during four (4) treatment sessions each day (evenly spaced during your waking hours). During each treatment session, you will take a series of breaths through the mouthpiece of the TYVASO Inhalation System.

Before inhaling your medicine, make sure the number displayed on screen matches your prescribed number of breaths for that treatment session. During the treatment the device counts down each breath after a set time interval. Once you complete all breaths, record the breath number in your Treatment Tracker.

Important: If the number of breaths displayed does not match the number of breaths in your prescription, see page 22 “Setting your prescribed dose” and repeat steps 1-4.
2. Hold the device upright

Hold the device upright and stand or sit in an upright position as shown below. Avoid covering the bottom of the device so that the audio speaker is not blocked.

Make sure you can see the display screen and lights clearly and that your hands do not cover the display screen or lights while holding device. If needed, you can move the inhalation piece and mouthpiece slightly to either side to see the screen and lights better.

Inhalation tips:

**Technique:**
When breathing each TYVASO treatment, be sure to keep the device level, directing the flow of medicine into the throat and not toward the roof of the mouth.

Seal your lips around the mouthpiece to ensure that you can inhale the full amount of TYVASO after it is produced by the device.

**Inhalation:**
Each breath should last approximately 3 seconds, breathing “normal full breaths.” Do not hold your breath. Remove your lips from the mouthpiece, exhale normally and prepare for the next breath.

See next page to start treatment.
3. **Press blue button to start treatment**

If you need to pause treatment, you can press the blue button. Press the button again to resume treatment. (Note: If you do not resume treatment after pausing, power off device.)

4. **Wait**

Look at the display screen for cues. Wait while device emits two (2) short beeps. When device emits one (1) long beep, exhale to prepare to inhale.

5. **Inhale**

When the device emits one (1) short beep and the indicator lights flash green, place your lips securely around the mouthpiece and inhale for three (3) seconds. When lights stop flashing, remove lips from mouthpiece and exhale normally.
6. Repeat for each breath left

The screen will decrease the number of breaths left by 1. Repeat steps 4 and 5 for the number of prescribed breaths.

7. Finish session

After displaying the last breath sequence, the green Done screen appears, the device emits a beep, and your treatment is done.

8. Record breaths, turn off device

Record the number of breaths you inhaled on the Treatment Tracker.

Press and hold blue button until screen turns off.

⚠️ CAUTION: If medicine does not appear to be flowing properly, the system might be set up incorrectly. See “Troubleshooting”, starting on page 64 for details.
Cleaning and Storing your TYVASO Inhalation System

**Section overview**

This section provides instructions for storing your nebulizer after each treatment and daily and weekly cleaning. There is also information about your monthly refill kits, replacing your device, and recharging the device’s battery.

**What you will need:**

- A clean place to work with the device
- TYVASO Inhalation device
- TYVASO Inhalation supplies
What’s covered in this section:

A: Storing between sessions during the day 48
B: End of day cleaning 52
C: Recharging the Battery 57
D: Weekly Cleaning 59
E: Monthly Refill Kit 60
F: Replacing your devices 61

Important:

For further support, you can:

- Fill out and refer to your emergency contact information on the back of this Instructions for Use.
- Call 1-877-UNITHER (1-877-864-8437) for questions and information, or to report an adverse reaction.
A: Storing between sessions during the day

If you have more treatment sessions left in the day, perform the steps in this section.

If you have completed your last treatment session of the day, skip to “End of day cleaning” on page 52.

Be sure to pack all parts, including the AC wall plug, in the carry case whenever transporting your device.

1. Disconnect AC wall plug (if it is currently connected)
2. Remove mouthpiece

Important: When removing accessories between treatment sessions, hold the device by its base to avoid spilling the medicine.
4. Remove both filter shells

Note: Do NOT remove the filter membranes from filter shells until after the last treatment session of the day.

5. Leave dome assembly

Leave dome assembly and medicine cup (with the medicine still in it) attached to the device.
6. Place plugs in dome assembly

Insert a plug into each of the two open holes on the dome assembly to prevent the medicine from spilling out.

**Important:** If the plugs are not in place, the medicine may spill. If you spill any medicine, start your next treatment with a new ampule.

7. Store in carry case

You can store the inhalation device with the plugged dome assembly and disassembled accessories in the carrying case between treatment sessions. Keep the carry case upright while inserting the device and components so that water and medicine does not spill out of the device.

**Important:** Store the inhalation device in an upright position until the next treatment session. See “Specifications” on page 76 for additional storage and transport information.
**B: End of day cleaning**

If you have completed your last treatment session of the day, perform the steps in this section.

1. **Disconnect AC wall plug**
   (if it is currently connected)

2. **Remove mouthpiece**

If you have more treatment sessions left in the day, refer back to “Storing between sessions during the day” on page 48.
3. Remove inhalation piece with attached filter shell

4. Remove both filter shells

5. Discard filter membranes
   Open filter shells by twisting in opposite directions. Remove and discard used filter membranes.
6. Remove dome assembly

Remove the dome assembly by turning it counter-clockwise (to the left). The medicine cup should stay attached to the dome assembly.

7. Remove medicine cup

Remove the medicine cup by gently squeezing on the sides where it is attached to the dome assembly.

Be careful not to spill any leftover medicine.

⚠️ CAUTION: If any medicine from the medicine cup spills on your hands, wash your hands immediately. Medicine contact with the skin can cause irritation.
8. Empty medicine cup

Empty any leftover medicine in the medicine cup into a waste basket, and discard the medicine cup.

Important: Discard remaining TYVASO® (treprostinil) Inhalation Solution in an appropriate waste receptacle. Discard plastic medicine cup in the trash. Do not reuse or recycle medicine cup.

9. Empty and clean device

Empty distilled water from chamber and let inhalation device air dry upside down. You can wipe the chamber with a soft cloth or paper towel to remove any remaining water.

Important: Do not place the inhalation device in water or in a dishwasher.
10. Clean accessories

Clean accessories (pictured below) by hand in mild, soapy, warm water, then rinse them thoroughly with water. Allow accessories to air dry.

- Dome assembly
- Inhalation piece
- Mouthpiece
- Filter shells

Important: Do not place the inhalation device or its accessories in a microwave, conventional oven, or dishwasher.

11. Store components

Once all the items are dry, you can store the filter shells, inhalation piece, mouthpiece, dome assembly, and inhalation device can be in the carrying case until the next day’s treatment sessions.

You can also recharge the device for the next day of use (see page 57.)
C: Recharging the Battery

1. Checking the battery’s status

You can recharge your battery at any time. Press and hold the blue button to power on the device to check battery status. Make sure the Run / Program switch is set to Run.

- The battery icon at the bottom of the screen indicates battery status:

  - “Charge battery” appears on screen if there is not enough charge to conduct a treatment session.

Important: Always charge the device before you first use it. You should also charge the device when not in use and in between uses.
2. Charging the battery

Plug the AC wall plug’s white connector into the port on the back of the inhalation device. Then, plug the AC wall plug into the wall outlet. The power status light above the port will light green when properly plugged in.

The device battery might take up to eight (8) hours to fully charge.

If the device is powered on, the battery charging icon appears next to the battery icon at the bottom of the screen.

Battery charging icon
D: Weekly Cleaning

Clean the device once a week to help avoid corrosion and leaks and to keep your device working properly.

Once a week, use a clean, dry cloth to wipe the interior of the inhalation device chamber. Make sure to wipe the two silver sensors and the white disc in the bottom of the device.

You may wipe the exterior of the device with a damp cloth if the lights or buttons become difficult to see.
E: Monthly Refill Kit

Once a month, you will receive a refill kit that will come with a new set of accessories from your specialty pharmacy provider.

- Inspect the shipment to be sure all parts are included.

- Once the new kit has arrived, discard the used dome assembly, inhalation piece, mouthpiece, and two (2) filter shells.

- Do not recycle the used accessories.

Note: Supplies are not shown to scale.
F: Replacing your devices

The inhalation devices should be replaced every two (2) years from your first day of use. Replacement inhalation devices will be supplied by your specialty pharmacy provider.

When you receive a new inhalation device your specialty pharmacy provider will provide instructions for returning the old device.
Help / More information about your TYVASO Inhalation System

Section overview

This section provides additional information about your device. Use this section to troubleshoot difficulties you have with the device, or to learn more about the device’s specifications and warranty.

What you will need:

- Access to a phone (to contact support if troubleshooting steps do not resolve the problem)
- A clean place to work with the device
- TYVASO Inhalation Device or supplies, as needed
What’s covered in this section:

A: Troubleshooting 64
B: Specifications 76
C: Glossary 87
D: Warranty information 90

Important:

For further support, you can:

- Fill out and refer to your emergency contact information on the back of these Instructions for Use.
- Call 1-877-UNITHER (1-877-864-8437) for questions and information, or to report an adverse reaction.

## Troubleshooting

**Problem**

Add Water screen appears

**Possible causes**

Chamber is empty or distilled water level is too low.

**Corrective actions**

Unplug device, if plugged in, and power off device. Remove dome assembly (making sure not to spill medicine) and place it aside, keeping it upright. Then empty water chamber.

Refill chamber with distilled water using water level cup (see page 32). Reassemble device. Power the device on and continue treatment.

</table>

If device still does not function after taking corrective actions listed above, contact your specialty pharmacy provider for a replacement.
### Troubleshooting

**Problem**

No medicine comes out of the device during a treatment session

**Possible causes**

- No TYVASO® (treprostinil) Inhalation Solution in the medicine cup
- Damaged medicine cup
- Distilled water level in the device chamber is too high

**Corrective actions**

- Unplug device, if plugged in, and power off device. Fill medicine cup with one (1) ampule of TYVASO. Reassemble device. Power the device on and continue treatment.
- Unplug device, if plugged in, and power off device. Replace the medicine cup. Reassemble device. Power the device on and continue treatment.
- Unplug device, if plugged in, and power off device. Empty the device chamber then refill it with 45 mL of distilled water (see page 32). Reassemble device. Power the device on and continue treatment.

“No medicine comes out” troubleshooting continues on next page.

C: Electromagnetic compatibility (EMC)

The Tyvaso Inhalation System has been tested and found to comply with the electromagnetic compatibility (EMC) limits for medical devices according to IEC 60601-1-2: (2007). Compliance is intended to provide reasonable protection against harmful interference in a typical user environment.

Table 1, Table 2 and Table 3 document the intended EMC use environment and established compliance levels for the Tyvaso Inhalation System. To ensure the intended performance, use the system in the environments described in these tables.

The Tyvaso Inhalation System is intended for use in the electromagnetic environment specified in this section.

</tbody>
</table>

The Tyvaso Inhalation System is intended for use in an electromagnetic environment in which radiated RF disturbances are controlled. The customer or the user of the Tyvaso Inhalation System can help prevent electromagnetic interference by maintaining a minimum distance between portable and mobile RF communications equipment (transmitters) and the Tyvaso Inhalation System as recommended below, according to the maximum output power of the communications equipment.
Table 3: Manufacturer’s Declaration – Recommended separation distances between portable and mobile communications equipment and the Tyvaso Inhalation System (continued)

<table>
<thead>
<tr>
<th>Recommended separation distances between portable and mobile RF communications equipment and the Tyvaso Inhalation System (continued)</th>
</tr>
</thead>
<tbody>
<tr>
<td>For transmitters rated at a maximum output power not listed above, the recommended separation distance $d$ in meters (m) can be estimated using the equation applicable to the frequency of the transmitter, where $P$ is the maximum output power rating of the transmitter in watts (W) according to the transmitter manufacturer.</td>
</tr>
</tbody>
</table>

NOTE 1  At 80 MHz and 800 MHz, the separation distance for the higher frequency range applies.

NOTE 2  These guidelines may not apply in all situations. Electromagnetic propagation is affected by absorption and reflection from structures, objects and people.
D: Glossary

**Accessories:** Parts of the TYVASO Inhalation System. See page 29.

**Ampule:** A sealed, lightweight clear plastic vial containing a 1-day supply of TYVASO® (treprostinil) Inhalation Solution.

**Black ring:** A round seal that fits on the bottom of the dome assembly. The seal helps ensure that TYVASO does not mix with the distilled water in the device chamber.

**Display screen:** A small area on the inhalation device that displays number and letter prompts to guide you through your treatment sessions.

**Distilled water:** Water that is highly purified so that it contains only essential elements.

**Dome assembly:** The plastic accessory that contains the baffle plate and connects the mouthpiece, inhalation piece, and filter shells to the base of the inhalation device.

**Filter membrane:** The white pad that goes into the filter shells.

**Filter shells:** Plastic accessories that hold the filter membranes.

**Inhalation indicator lights:** Two green lights on the top surface of the inhalation device that signals when you should inhale.
**Inhalation piece:** The plastic accessory that connects the mouthpiece with the dome assembly.

**Inhalation device:** The base of the TYVASO Inhalation System to which the accessories connect. The inhalation device contains the display screen and lights.

**Inhale:** How you will breathe in TYVASO with the TYVASO Inhalation System.

**Medicine cup:** The disposable plastic cone-shaped cup into which TYVASO is poured. The medicine cup fits inside the inhalation device chamber.

**Mouthpiece:** The plastic part that you will breathe through (using your mouth) to inhale TYVASO.

**On/Off, Start/Pause button:** A manually activated control on the front of the device that switches between fully on and fully off power states. Once the device power is on, the button begins or pauses treatment.

**Plugs:** Plastic accessories that are inserted into the openings of the dome assembly between treatment sessions. Plugs help keep TYVASO from spilling if the inhalation device tips over.

**Power status light:** LED on the back of the device that lights green when power is connected and battery is charging.

**Power port:** Port on back of device for plugging into a power source using the AC wall plug.
Prompts: The audio and visual signals that help guide you through the treatment sessions.

Run / Program switch: A manually activated control on the side of the device that switches between the modes for delivering treatment (Run) and programming breaths (Program).

Sensors: The silver objects on the inside wall of the device chamber. The sensors must be covered with distilled water for the TYVASO Inhalation System to function properly.

Specialty pharmacy provider: A pharmacy that carries only specialized medicines and medical devices. Your specialty pharmacy provider is a good source of information about TYVASO and the TYVASO Inhalation System.

Treatment session: One (1) of four (4) daily sessions during which you will take TYVASO with a specific number of inhalations.

TYVASO: The prescription medicine that you will use with the TYVASO Inhalation System.

Volume / Breaths switch: A manually activated control on the side of the device that increases or decreases audio volume (when in Run mode) and programmed breaths (when in Program mode).

Water chamber: The white hollow portion in the center of the inhalation device into which distilled water and the medicine cup are placed.
E: Warranty information

Your Tyvaso Inhalation System is granted a full replacement or repair warranty good for two (2) years from your date of receipt of the TYVASO Inhalation System Starter Kit or five (5) years from the date of manufacture, whichever comes first. This warranty applies to the TYVASO Inhalation System device only. Accessory components are not covered under warranty.

Circumstances that may void your warranty include:

- Modification or disassembly of the TYVASO Inhalation System device by anyone other than a factory-authorized technician
- Failure to comply with these written Instructions for Use when operating the TYVASO Inhalation System
- Unapproved use of the TYVASO Inhalation System
For all inquiries relating to service or warranty for your TYVASO Inhalation System, contact your specialty pharmacy provider.

You should have the following information available:

- Device serial number (located on bottom of TYVASO Inhalation System)
- Date TYVASO Inhalation System was acquired
- Nature of the problem and any steps taken to fix it

Graphics in IFU are for representation only. Images may not be shown to scale.
TYVASO Inhalation Solution is for prescription use only.
