When the front steps start feeling like Mount Everest...
MAYBE IT’S TIME TO ADD TYVASO.

Tyvaso is approved for the treatment of pulmonary arterial hypertension (PAH; WHO Group I), to improve exercise ability.

Please see Important Safety Information throughout and on page 15 and accompanying Full Prescribing Information in pocket.
“I hope Tyvaso will help you, as it’s helped me.”
– Marla A., Tyvaso Patient

SELECTED IMPORTANT SAFETY INFORMATION
Before you take Tyvaso, tell your healthcare provider about all of your medical conditions, including if you:

- Have lung disease, such as asthma or chronic obstructive pulmonary disease (COPD)
- Have a lung infection
- Have liver or kidney problems
- Have low blood pressure
- Have bleeding problems

Please see Important Safety Information throughout and on page 15 and accompanying Full Prescribing Information in pocket.

If you're not doing as well as you'd like, are you ready to talk with your doctor about Tyvaso?
What is Tyvaso?

Tyvaso (treprostinil) is a prescription medicine used in adults to treat pulmonary arterial hypertension (PAH; WHO Group I), which is high blood pressure in the arteries of your lungs. Tyvaso can improve the ability to exercise. Your ability to exercise decreases 4 hours after taking Tyvaso. It is not known if Tyvaso is safe and effective in children under 18 years of age.

SELECTED IMPORTANT SAFETY INFORMATION
Before you take Tyvaso, tell your healthcare provider about all of your medical conditions, including if you (continued):
- Are pregnant or plan to become pregnant. It is not known if Tyvaso will harm your unborn baby.
- Are breast-feeding or plan to breast-feed. It is not known if Tyvaso passes into your breast milk. Talk to your healthcare provider about the best way to feed your baby during treatment with Tyvaso.

Please see Important Safety Information throughout and on page 15 and accompanying Full Prescribing Information in pocket.
"Tyvaso helps me walk a little farther and do a little more."
– Karen F., Tyvaso Patient

SELECTED IMPORTANT SAFETY INFORMATION

Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements. Tyvaso and other medicines may affect each other.

Especially tell your healthcare provider if you take:

- Medicines used to treat high blood pressure or heart disease
- Medicines that decrease blood clotting (anticoagulants)
- Water pills (diuretics)
- Gemfibrozil (Lopid) or rifampin (Rimactane, Rifadin, Rifamate, Rifater)

Please see Important Safety Information throughout and on page 15 and accompanying Full Prescribing Information in pocket.
Prostacyclin is a natural substance made by your body. Prostacyclin helps keep the blood vessels in the lungs open and working properly. Patients with PAH may not produce enough natural prostacyclin.

Tyvaso is a form of man-made prostacyclin called a prostacyclin analogue. It mimics some of the effects of natural prostacyclin, helping to keep the blood flowing through your lungs.

**NORMAL LEVEL OF PROSTACYCLIN**

**PROSTACYCLIN DEFICIENCY**

**ADDING PROSTACYCLIN ANALOGUE**

Prostacyclin

Tyvaso

* Illustrations show natural prostacyclin in the body with and without prostacyclin analogue but are not intended to suggest actual levels of either.

**Tyvaso mimics the natural prostacyclin you are missing.**

**What does this mean to me?**

In the 12-week clinical study of Tyvaso, patients were taking an oral PAH medicine and completed a 6-minute walk test at the beginning and end of the study. Patients added Tyvaso to their oral PAH medicine and completed a 6-minute walk test in 6 minutes on Tyvaso.

**SELECTED IMPORTANT SAFETY INFORMATION**

What are the possible side effects of Tyvaso?

Tyvaso can cause serious side effects, including:

- Low blood pressure (sudden dizziness; fainting; feeling light-headed; feeling weak all over; feeling cold; feeling short of breath; feeling like you might pass out)

- Bleeding problems. Tyvaso may increase the risk of bleeding in people who take blood thinners (anticoagulants).

Please see Important Safety Information throughout and on page 15 and accompanying Full Prescribing Information in packet.

Tyvaso may help you walk farther.

**Tyvaso may help you walk farther.**

Patients who added Tyvaso to their oral PAH medicine walked an average of 71 feet (21.6 meters) farther at the end of the study. Those who did not add Tyvaso walked an average of 10 feet (3 meters) farther.

Tyvaso may help you do more in your day — go for a stroll, walk your kids to the bus stop, or walk to a mailbox.

Tyvaso helps to stop blood platelets from clumping together. This may help the heart pump blood more easily into the lungs. Tyvaso helps to open up the blood vessels in the lungs.

Tyvaso is inhaled directly into your lungs.
HAVING PAH CAN BE LIFE CHANGING.
But one thing you can be sure of is that there are lots of places to turn for help.

Find helpful videos, tools, and downloads.
You’ll find lots of help on our website, as well as links to additional resources.

Need financial assistance?
There are programs, such as the Tyvaso Co-pay Assistance Program, that may be available to assist you.

Learn more about PAH.
Find more in-depth information about PAH at United by PAH.

Reach out to a current patient—learn what taking Tyvaso is really like.
No one can offer support quite like someone already taking Tyvaso. We offer a program that connects you with a current Tyvaso patient who can answer questions and give you lifestyle tips. Tyvaso PEER Mentors volunteer their time to support new patients and people who are considering Tyvaso. Reach out and connect with the Tyvaso PEER Network today!

Sign up for the Tyvaso support program. Whether you’re considering Tyvaso or taking it already, this email newsletter is packed with information, education, and helpful tips. Before starting Tyvaso, you’ll learn more about how Tyvaso works, how it can fit into your daily schedule, and information to discuss with your doctor. We’ll also send you information and updates on PAH, plus helpful hints and suggestions from other patients. Wherever you are on your journey, sign up and start receiving this support right away.

"I like talking to other patients and sharing my experience. Knowledge is power. And the more you know, the less scary it is."
– Karen F., Tyvaso Mentor
The Tyvaso Inhalation System is a lightweight portable device.

Before you take Tyvaso, tell your healthcare provider about all of your medical conditions, including if you:

- Have lung disease, such as asthma or chronic obstructive pulmonary disease (COPD)
- Have a lung infection
- Have liver or kidney problems
- Have low blood pressure
- Have bleeding problems
- Are pregnant or plan to become pregnant. It is not known if Tyvaso will harm your unborn baby.
- Are breast-feeding or plan to breast-feed. It is not known if Tyvaso passes into your breast milk. Talk to your healthcare provider about the best way to feed your baby during treatment with Tyvaso.

Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements. Tyvaso and other medicines may affect each other.

Especially tell your healthcare provider if you take:

- Medicines used to treat high blood pressure or heart disease
- Medicines that decrease blood clotting (anticoagulants)
- Water pills (diuretics)
- Gemfibrozil (Lopid) or rifampin (Rimactane, Rifadin, Rifamate, Rifater)

What are the possible side effects of Tyvaso?

Tyvaso can cause serious side effects, including:

- Low blood pressure (symptomatic hypotension). If you have low blood pressure, Tyvaso may lower your blood pressure more.
- Bleeding problems. Tyvaso may increase the risk of bleeding in people who take blood thinners (anticoagulants).

The most common side effects of Tyvaso are cough, headache, throat irritation and pain, nausea, reddening of the face and neck (flushing), fainting or loss of consciousness, dizziness, and diarrhea. These are not all the possible side effects of Tyvaso. Call your doctor for medical advice about side effects.

You may report side effects to the FDA at www.fda.gov/MedWatch or call 1-800-FDA-1088.

This information is provided for an informational purpose and is not intended as treatment advice. Patients should consult a healthcare professional for treatment advice.
